## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U. S. C. 121:
  - I. Claims 1-66, drawn to a pharmaceutical composition in the form of liquid or powder comprising an erythropoietin glycoprotein product, a multiple charged inorganic anion and a pharmaceutical buffer, wherein the product is a human erythropoietin, a modification in the sequence of human erythropoietin, or a pegylated erythropoietin, classified in class 514, subclasses 8 and 42.

Applicant is required to select one sequence modification of human erythropoietin for the glycosylation site in claim 15, 18, 40 or 43. Any change of amino acid residue at any one or more positions is considered, absent factual data to the contrary, a distinct peptide. This is not species election.

2. The inventions are distinct, each from the other because of the following reasons:

The claims are directed to a pharmaceutical composition containing an erythropoietin glycoprotein product, wherein the product is a human erythropoietin, a modified sequence of human erythropoietin, or a pegylated erythropoietin. Each modified erythropoietin glycoprotein is patentably distinct from each other because each sequence has different glycosylation site(s) and produces different effect in the biological activity of erythropoietin.

Because these inventions are distinct for the reasons given above, and because Inventions require different searches but are not co-extensive, examination of these distinct inventions would pose a serious burden on the examiner and therefore restriction for examination purposes as indicated is proper.
